# **MOBILE APP SUCCESS PREDICTION**

**IS YOUR APP HERO OR ZERO ???**

# WHAT'S HAPPENNING

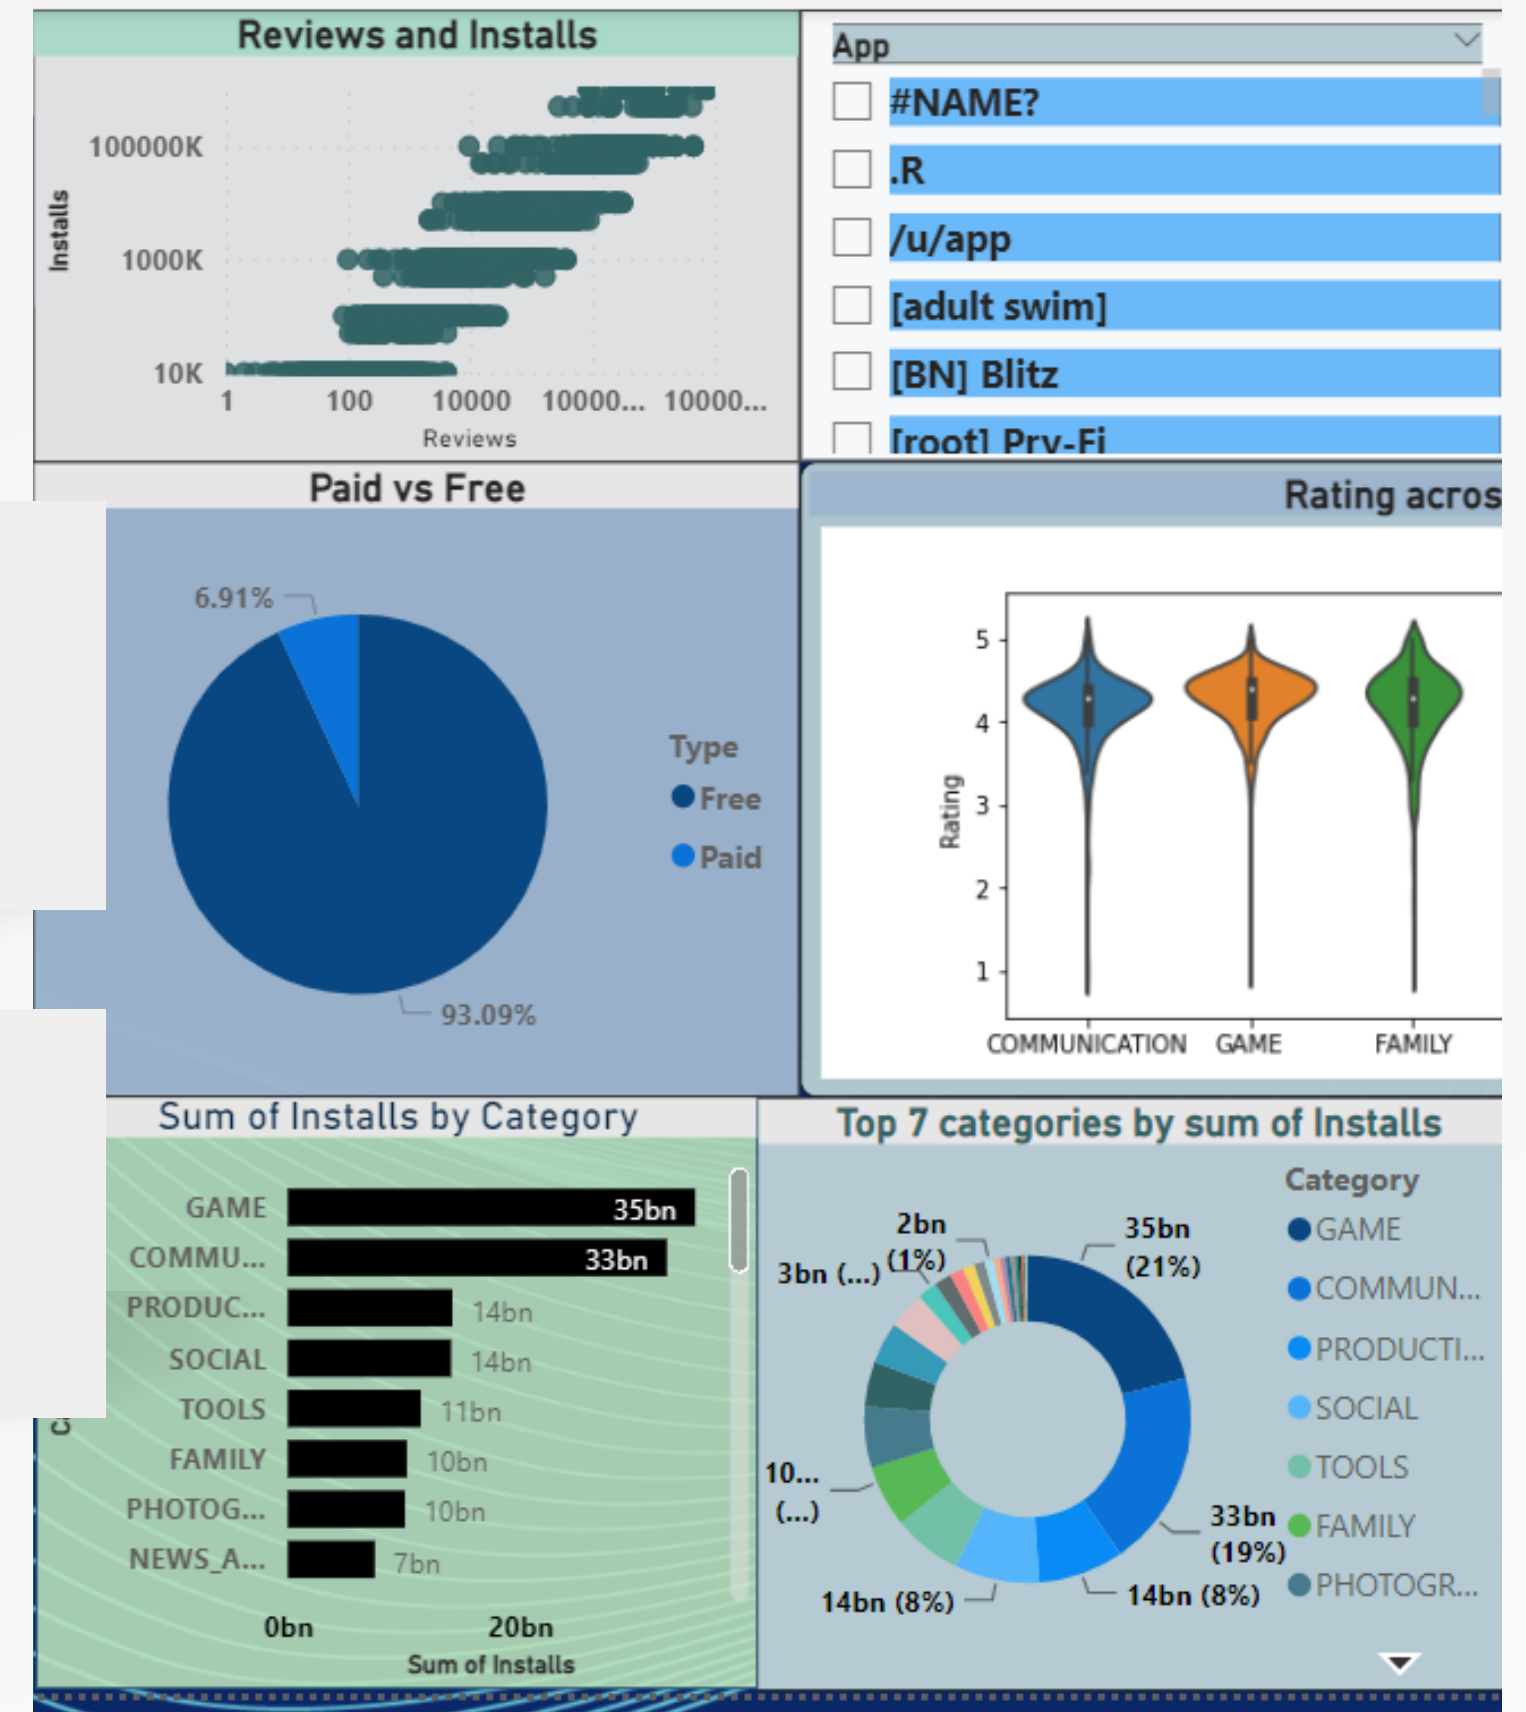

Input:

Rating, Reviews, Installs, Type, Price(\$),  
Content Rating, Size(MB)

Output:

Successful or Unsuccessful

# TARGET CUSTOMERS

# DATA TALK

## *Dataset*

**Source:** Kaggle

**Dataset:** Google play store

- Rows: 10841
- Columns: 9

- Converting into numerical values.
- Cleared the null values and then renamed certain columns for normalization.
- Implemented k means clustering to acquire the target variable.

## *Preprocessing*

- 
- NUMPY
  - PANDAS
  - MATPLOTLIB
  - SEABORN
  - PLOTLY
  - POWER BI
  - CHATGPT

### Improved

- Knowledge in machine learning algorithms
- Better handling of data
- Dashboard implementation

# Technologies Used

# BUSINESS DRIVER

- Investing resources in the right mobile apps
- Can increase their chances of generating revenue

- It avoids loss in your business
- If it is not performing well, upgrade with the required features

# MATH-STAT TALK

## K Means Clustering

In the Euclidean plane, let point  $p$  have Cartesian coordinates  $(p_1, q_1)$  and let point  $q$  have coordinates  $(q_1, q_2)$ . Then the distance between  $p$  and  $q$  is given by

$$d(p, q) = \sqrt{(q_1 - p_1)^2 + (q_2 - p_2)^2}.$$

$$\text{WCSS}(k) = \sum_{j=1}^k \sum_{\mathbf{x}_i \in \text{cluster } j} \|\mathbf{x}_i - \bar{\mathbf{x}}_j\|^2,$$

where  $\bar{\mathbf{x}}_j$  is the sample mean in cluster  $j$

## Decision tree

$$\text{Gini} = 1 - \sum_{i=1}^n p^2(c_i)$$

$$\text{Entropy} = \sum_{i=1}^n -p(c_i) \log_2(p(c_i))$$

# LIVE DEMO

```
In [100]: cmod.predict([[4.1,17600000,43,5000000000,0,0,1]]) # Data of Whatsapp
```

```
Out[100]: array([1])
```

```
In [99]: cmod.predict([[4,1100000,17,5000000000,0,0,1]]) # Data of Hotstar
```

```
Out[99]: array([1])
```

```
In [97]: cmod.predict([[3.7,1600,18,10000,0,0,2]]) #Alo Social Random chat
```

```
Out[97]: array([0])
```

```
In [101]: cmod.predict([[2.4,2000000,80,1000000,0,0,1]]) # Kik messaging & chat app
```

```
Out[101]: array([1])
```

# JOURNEY

- Setting the objective at first
- Choosing the right algorithm
- Time Management

**CHALLENGES**

- Clarity of goals
- Effective Planning
- Continuous Improvement

**CONQUERED**

- More relatable to business world
- 3D graph
- User-Interactive Dashboard

**UNIQUENESS**

**01**

---

**WHAT WE  
LEARNT?**

- Combine two algorithms
- Teamwork
- Settling disagreements in case of conflicts of interest

**02**

**COUNTERING  
DISAGREEMENTS**

- Set clear goals and expectations
- Respect different perspective
- Follow up and evaluate

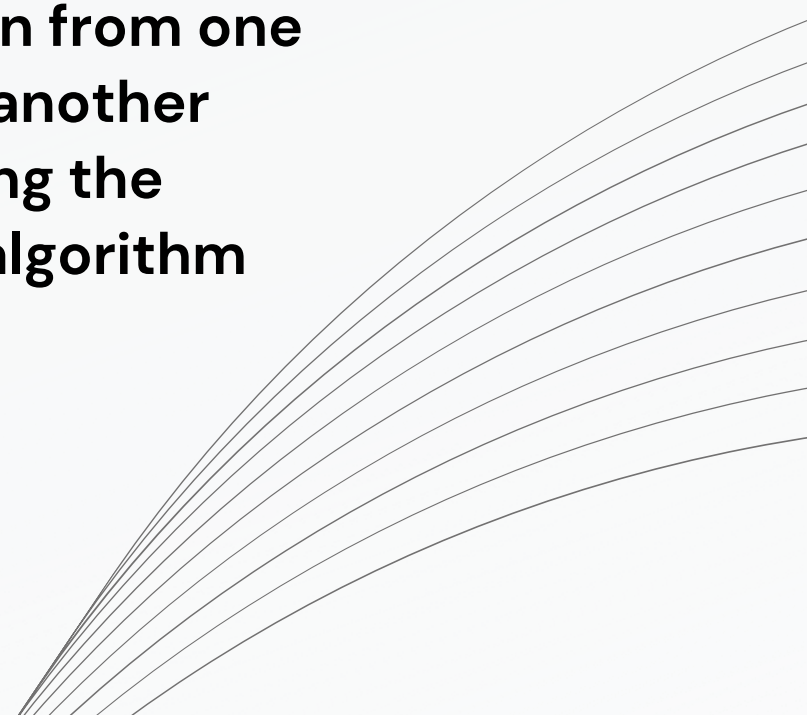

**03**

**NEXT**

- Sentiment Analysis on user reviews for better performance and analysis of data.

**04**

**EUREKA MOMENT**

- Transition from one topic to another
  - Identifying the correct algorithm
-
